## Glucosamine Gravy™ for Dogs & Cats

- *A Nutritional Liquid for Dogs & Cats*
- *Special Rich Blend*
- *7500mg of Glucosamine per fl. oz.*

### Profile

Glucosamine Gravy™ was developed to provide a palatable, easy to use liquid to help dogs and cats suffering from arthritis, hip dysplasia, and other bone and joint abnormalities. Degeneration of the connective tissue, whether caused by age or high levels of stress, dramatically affects how well an animal's joints function. Articular cartilage is critical to joint metabolism. Lubrication and shock absorption rely on intricate systems involving synovial fluid, articular cartilage, bone and soft tissue. The key lies in protecting the disturbed connective tissue and enhancing synovial fluid viscosity.

### About the Product

Glucosamine has become an accepted product in the pet market for its results in chronic joint disorders. Recent research shows glucosamine HCl provides joint protection better than glucosamine sulfate or chondroitin sulfate. It also shows glucosamine HCl alone, possesses the ability to maintain healthy joint function as well as the glucosamine and chondroitin combination products.

### Directions for Use:

Easy pump per weight ratio:

Animal Weight	# Pumps	Amount
Up to 25#	1	2 ml
26# to 50#	2	4 ml
51# to 100#	3	6 ml

### Available In

200ml bottle with 2ml pump  
6 - 200ml bottles per box

Note: The animal should be kept on the initial dose for five to six weeks. As gradual improvement is noted, a maintenance dose of one-half the initial dose may be used.
